Official Launch Event

Artificial intelligence in finance: ethical challenges and opportunities

Online Zoom event, 5 pm (CET)

About the Prize

The launch of the 9th edition (2022/2023) of the global Prize *Ethics & Trust in Finance for a Sustainable Future* will encourage candidates to reflect on the role of ethics to help shape a more sustainable and responsible financial system for the future. Such intellectual effort is made all the more necessary and urgent by the growing importance of the financial stake in private and public affairs and by the mounting challenge of climate change and the deployment of new technologies in finance.

About the Event

The increasing use of artificial intelligence (AI) in finance is expected to bring many opportunities and benefits for the industry, its customers and the society. At the same time, it raises important issues of ethical responsibility, legal accountability and governance. The subjects of ethics and trust in finance have a pivotal role to play in assessing the implications of these new technologies and to identify the benefits and risks related to their use. We look forward to exploring bright new ideas from a diverse group of brilliant people.
